

NUN

Nun is made of breathing material to make sure that the wound is not closed off.

Nun cannot be physically attached to the shoe, but it does stay in place thanks to the perfect form.

NUN

Nun is a useful tool that can be used to protect the Orthopedic Bandage shoe / heel protector by REBACARE® in the case of exuding wounds. Nun can be placed deep into the Orthopedic Bandage shoe / heel protector, and functions as an extra layer between bandages and the shoe.

Nun does not touch the skin. If desirable, the Nun can be sterilised. Using a ballpoint pen, the name of the user can be written on the washing label. Nun cannot be physically attached to the shoe, but it does stay in place thanks to the perfect form.

NUN

- Is made of breathing material to make sure that the wound is not closed off
- Disinfect with 70% alcohol and max. 1000 ppm Chlorine, Oxyfoam, detergent or OxyWipe
